

Alarming report on pork: full of harmful bacteria?

Of nearly 200 pork samples tested by Consumer Reports, many tested positive for salmonella, listeria, staph bacteria. The magazine says a whopping 69 percent contained yersinia, which infects nearly 100,000 Americans every year. Children are especially vulnerable.

Stephen Morse, of the Columbia University School of Public Health, said, "You always expect to find some bacteria in any meat product. But those are usually harmless. I think the real surprise here was to find so many potentially disease-causing bacteria."
